

RECURSION WRAP UP

Problem Solving with Computers-I

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

head

sumRest

Imagine each instance of sumList to be a doll!
Calling sumList is like creating a new doll.

First call to sumList!

```
double s=sumList(h);
```

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

The turtle tells us which line of code is going to be execute

sumList(1)

First call to sumList!

```
double s=sumList(h);
```

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

Second call to sumList!

sumRest

First call to sumList!

```
double s=sumList(h);
```

sumList(1)

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

Turtle is going to execute the first line of sumList(2)

```
double sumList(Node* head){
```

```
    double sumRest;
```

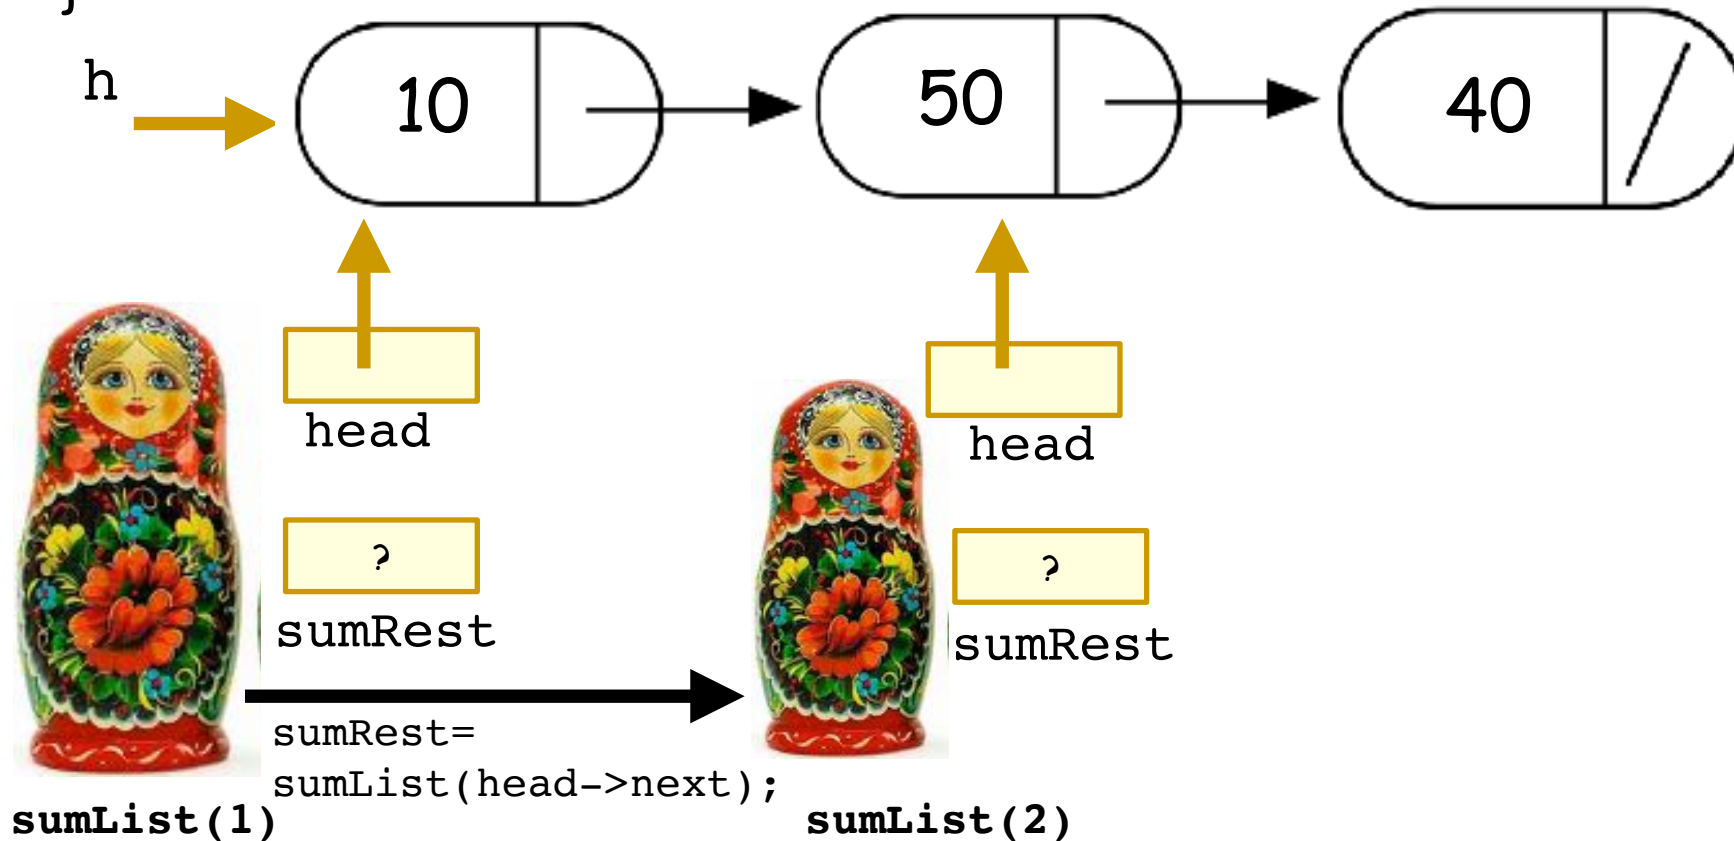

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

Third call to sumList

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

head

sumRest

**sumRest =
sumList(head->next);**

sumList(1)

head

sumRest

**sumRest =
sumList(head->next);**

sumList(2)

head

sumList(3)

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

sumRest =
sumList(head->next);

sumList(1)

sumRest =
sumList(head->next);

sumList(2)

sumRest =
sumList(head->next);

sumList(3)

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

h

Hello sisters
on the stack!

head

sumRest

sumRest=
sumList(head->next);

sumList(1)

head

sumRest

sumRest=
sumList(head->next);

sumList(2)

head

sumRest

sumRest=
sumList(head->next);

sumList(3)

NULL
head

sumList(4)

```
double sumList(Node* head){
```

```
    double sumRest;
```

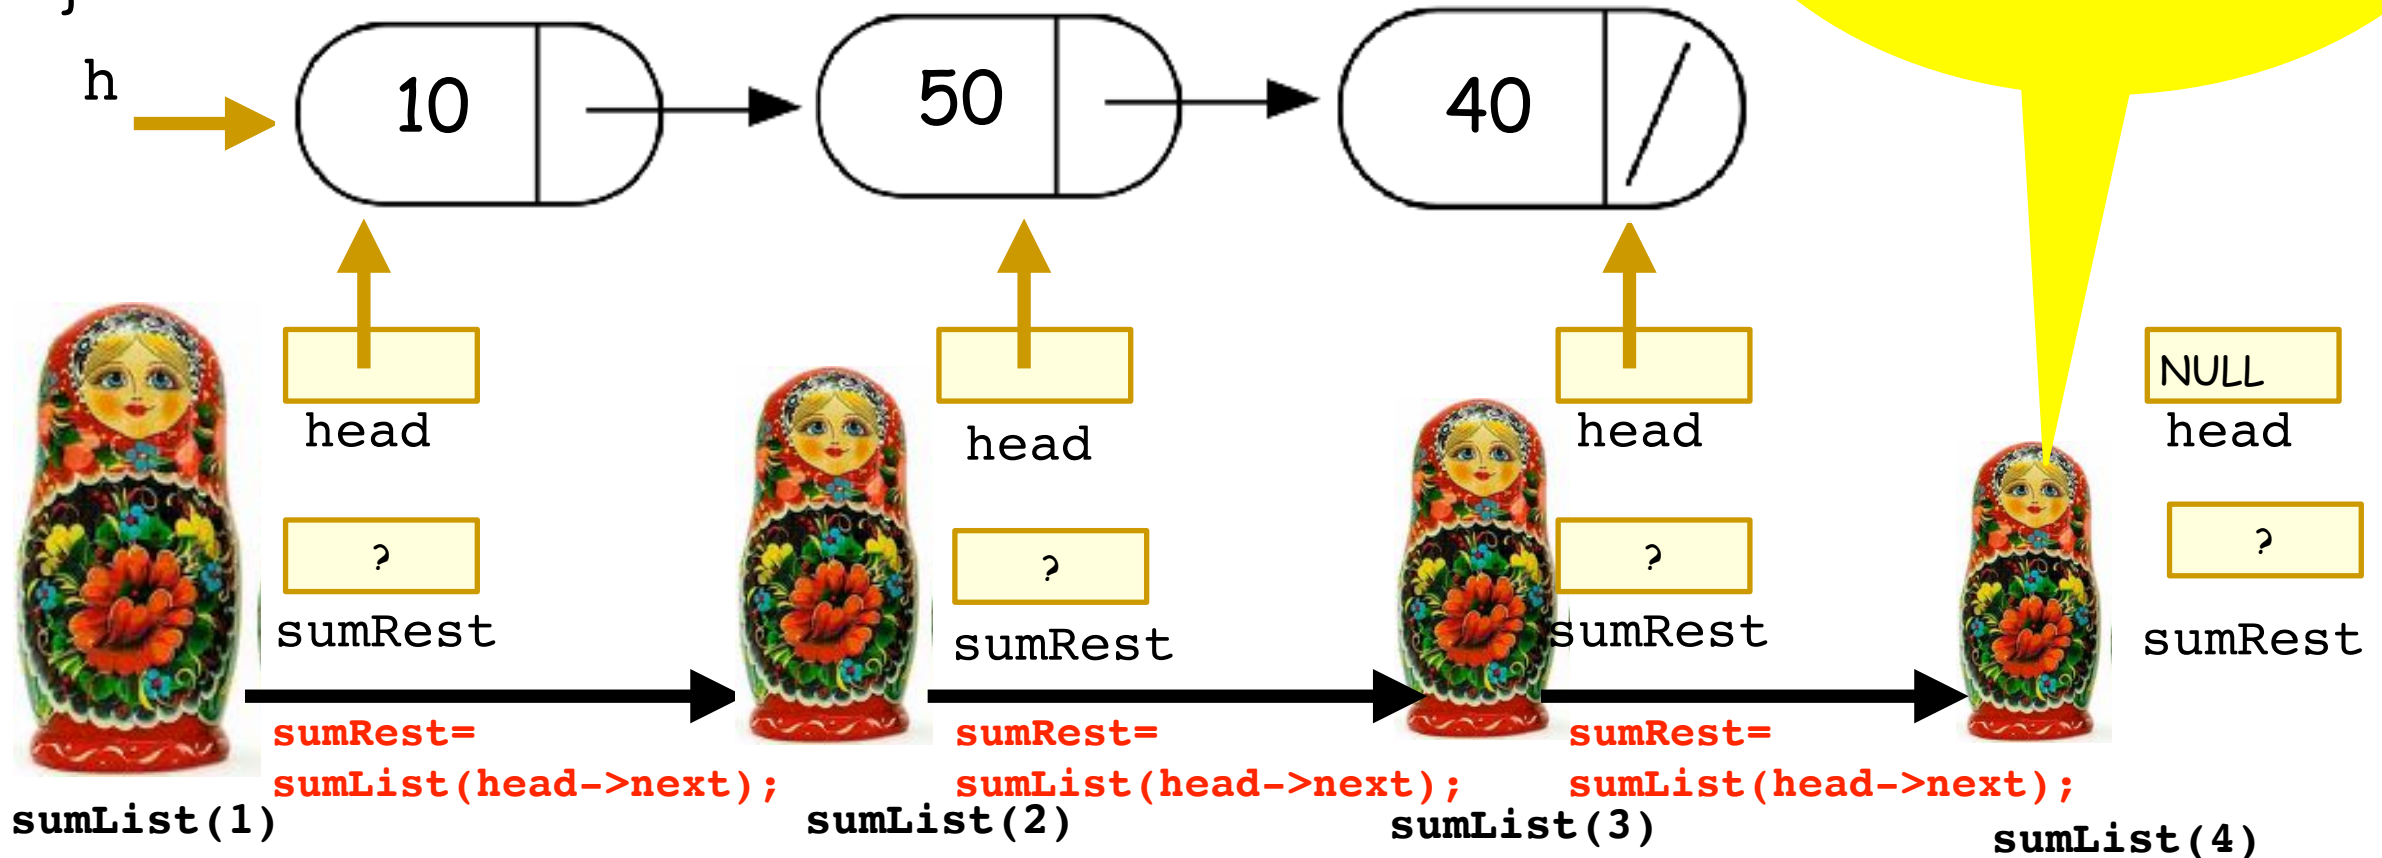

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

Oops my head is null
and turtle is about to
dereference it !!!!

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next); 
```

```
    return head->data + sumRest;
```

```
}
```

h

head

?

sumRest

**sumRest =
sumList(head->next);**

sumList(1)

head

?

sumRest

**sumRest =
sumList(head->next);**

sumList(2)

head

?

sumRest

**sumRest =
sumList(head->next);**

sumList(3)

NULL

head

?

sumRest

sumList(4)

No turtle noooooooooo !!!! 

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

Sorry I just follow instructions!

No turtle
noooooo !!!!

sumList(1)

head

sumRest

sumRest =
sumList(head->next);

segfault!!!!

sumList(2)

sumRest =

sumList(head->next);

sumList(3)

head

?

sumRest

sumRest =

sumList(head->next);

sumList(4)

NULL

head

?

sumRest

sumRest =

sumList(head->next);

```
double sumList(Node* head){
```

```
    double sumRest;
```

```
    sumRest = sumList(head->next);
```

```
    return head->data + sumRest;
```

```
}
```

Sorry I just follow instructions!

No turtle
noooooo !!!!!

If only we had a base case....

sumList(1)

sumRest =
sumList(head->next);

sumList(2)

sumRest =
sumList(head->next);

sumList(3)

sumRest =
sumList(head->next);

sumList(4)

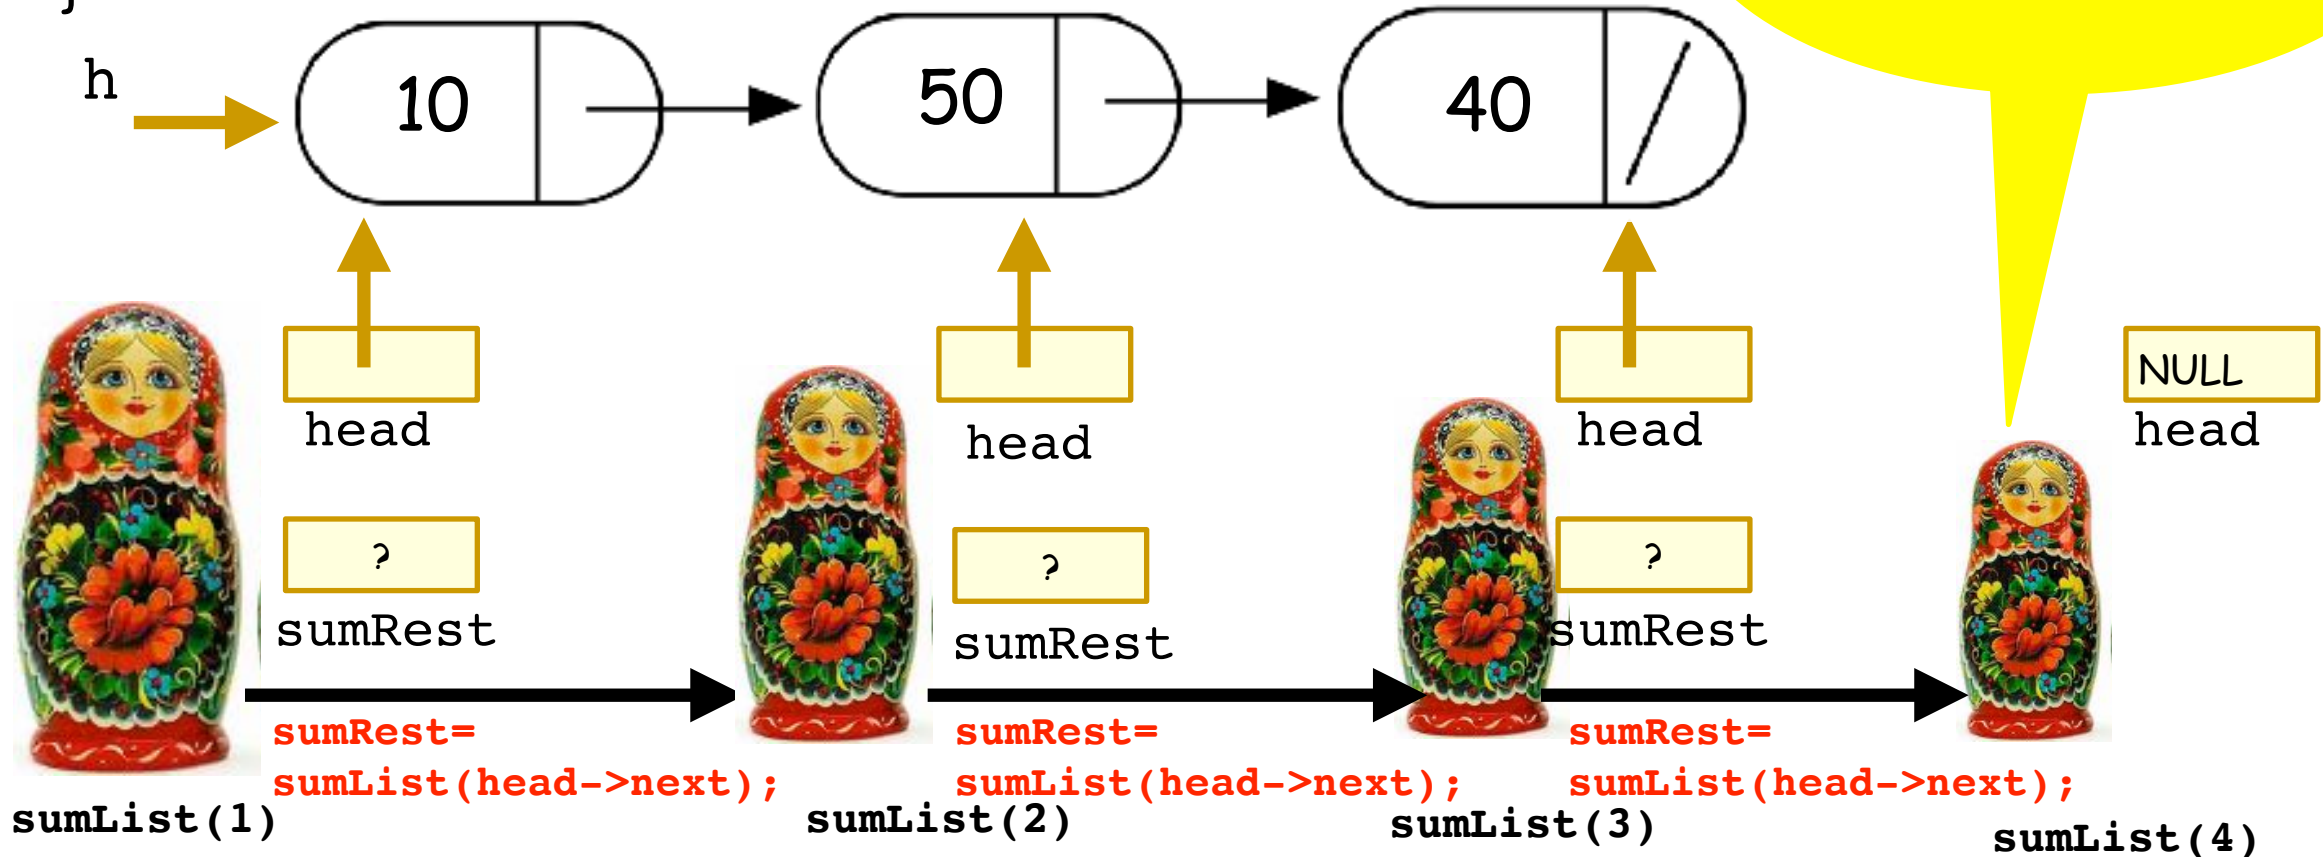

sumRest =
sumList(head->next);

```
double sumList(Node* head){
    if(head==0) return 0;
    double sumRest;
    sumRest = sumList(head->next);
    return head->data + sumRest;
}
```

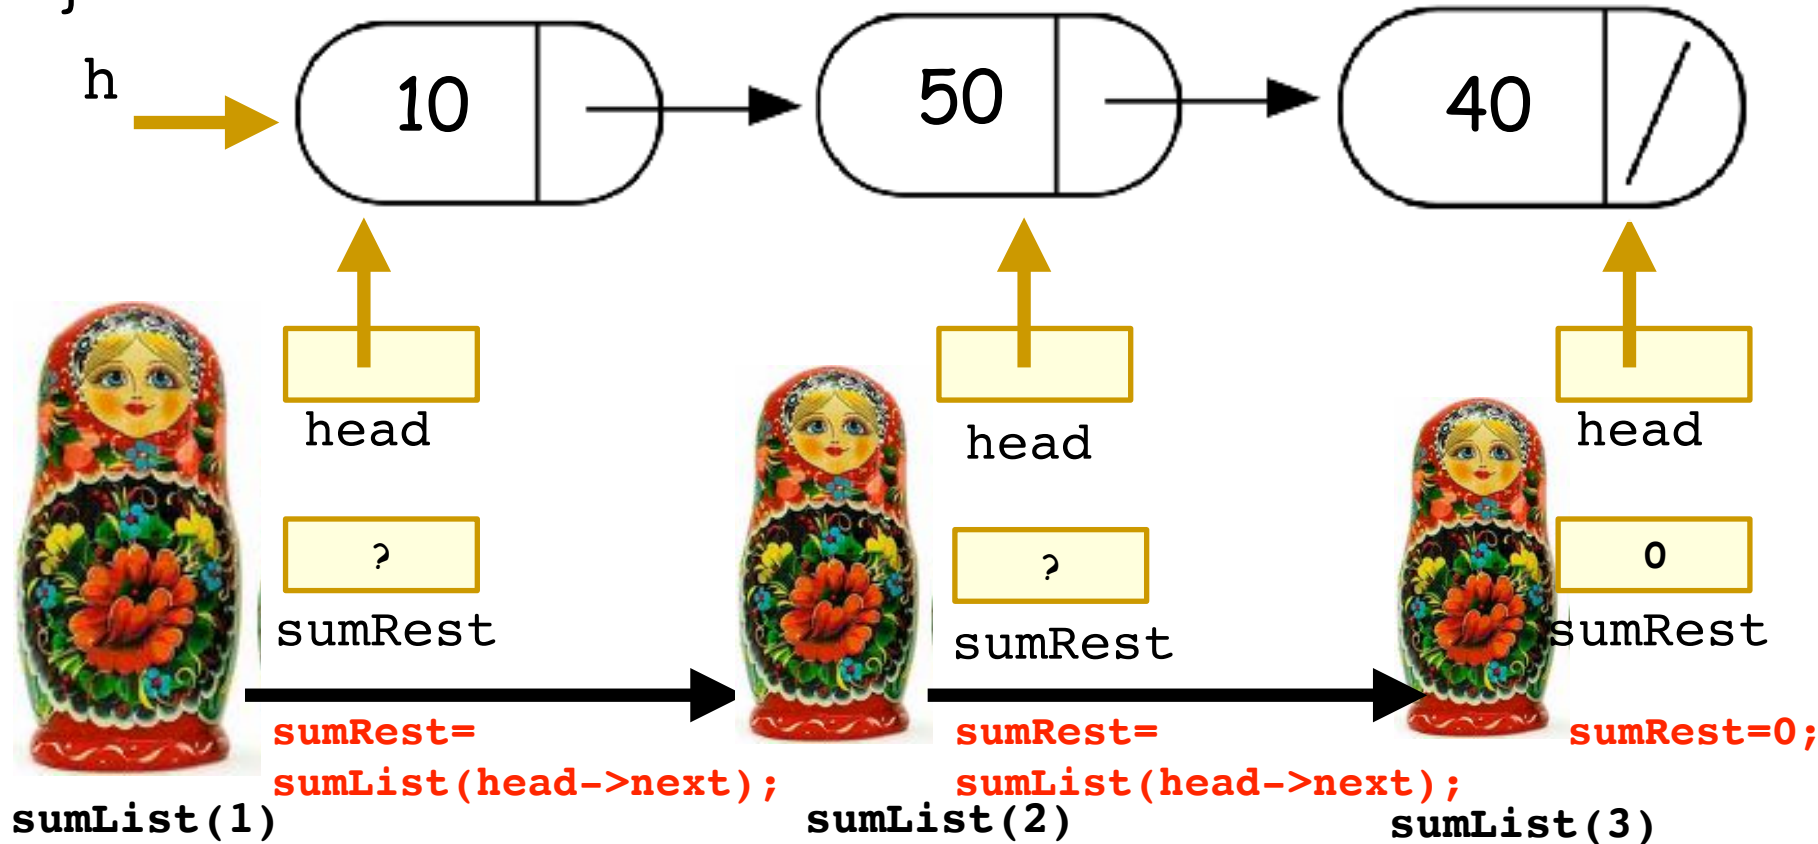

I am really well behaved
around base cases :)

return 0;

```
double sumList(Node* head){
    if(head==0) return 0;
    double sumRest;
    sumRest = sumList(head->next);
    return head->data + sumRest;
}
```

Hello again sumlist(3)! Your younger sister hit the base case.

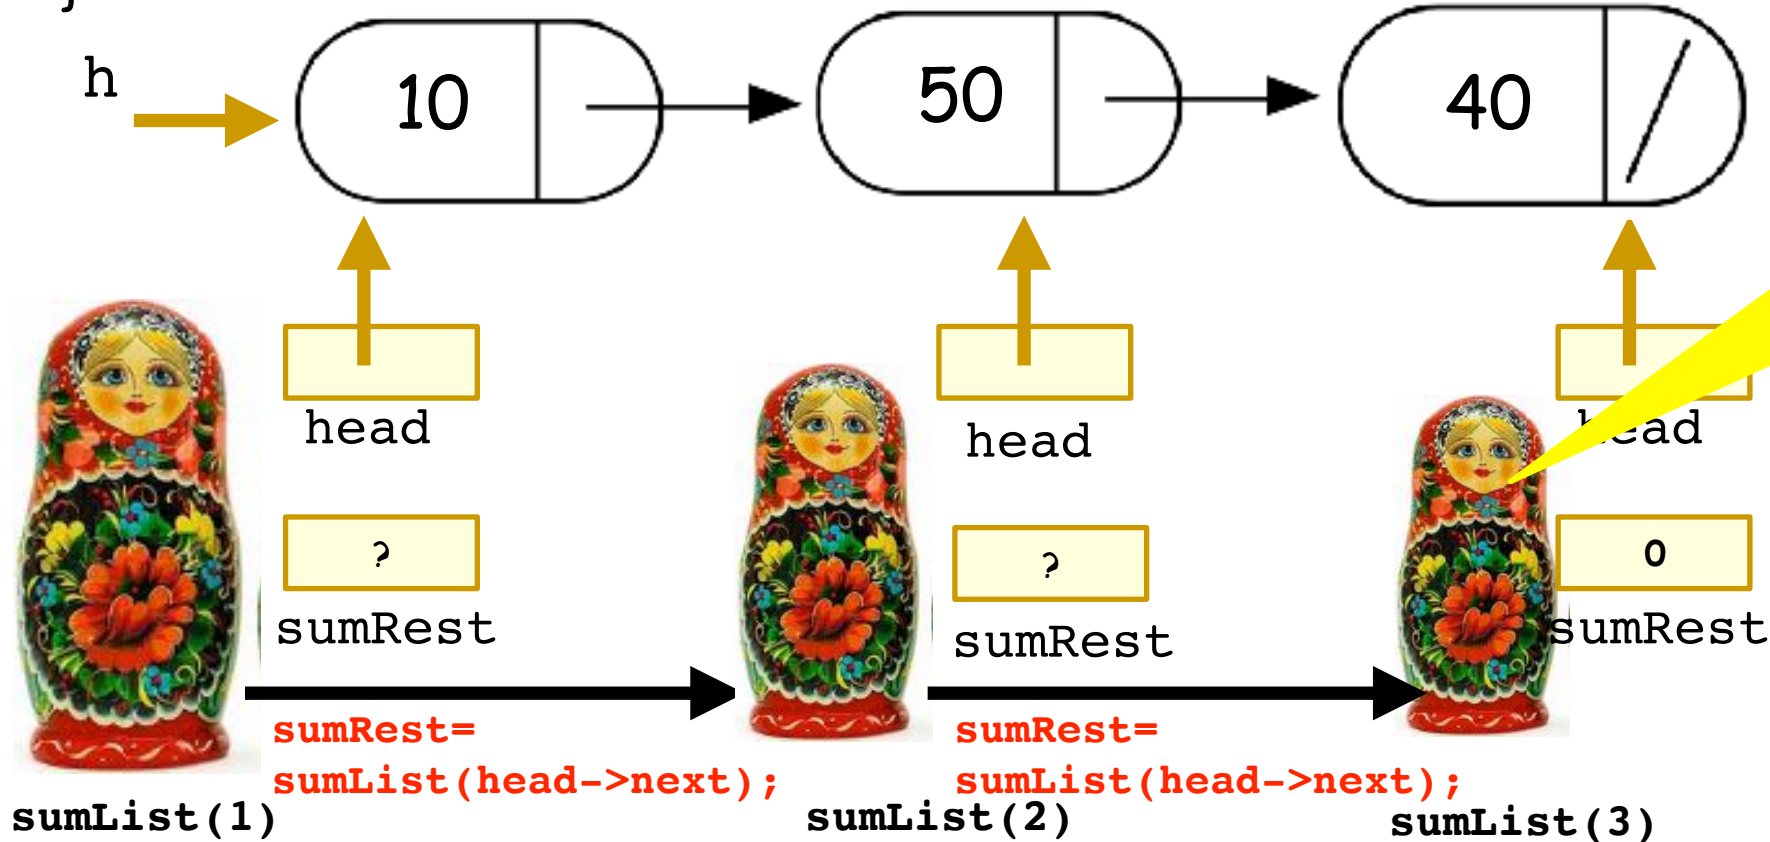

```
double sumList(Node* head){
    if(head==0) return 0;
    double sumRest;
    sumRest = sumList(head->next);
    return head->data + sumRest;
}
```

Turtle takes it one line at a time.

**return
40+0;**

sumList(1)

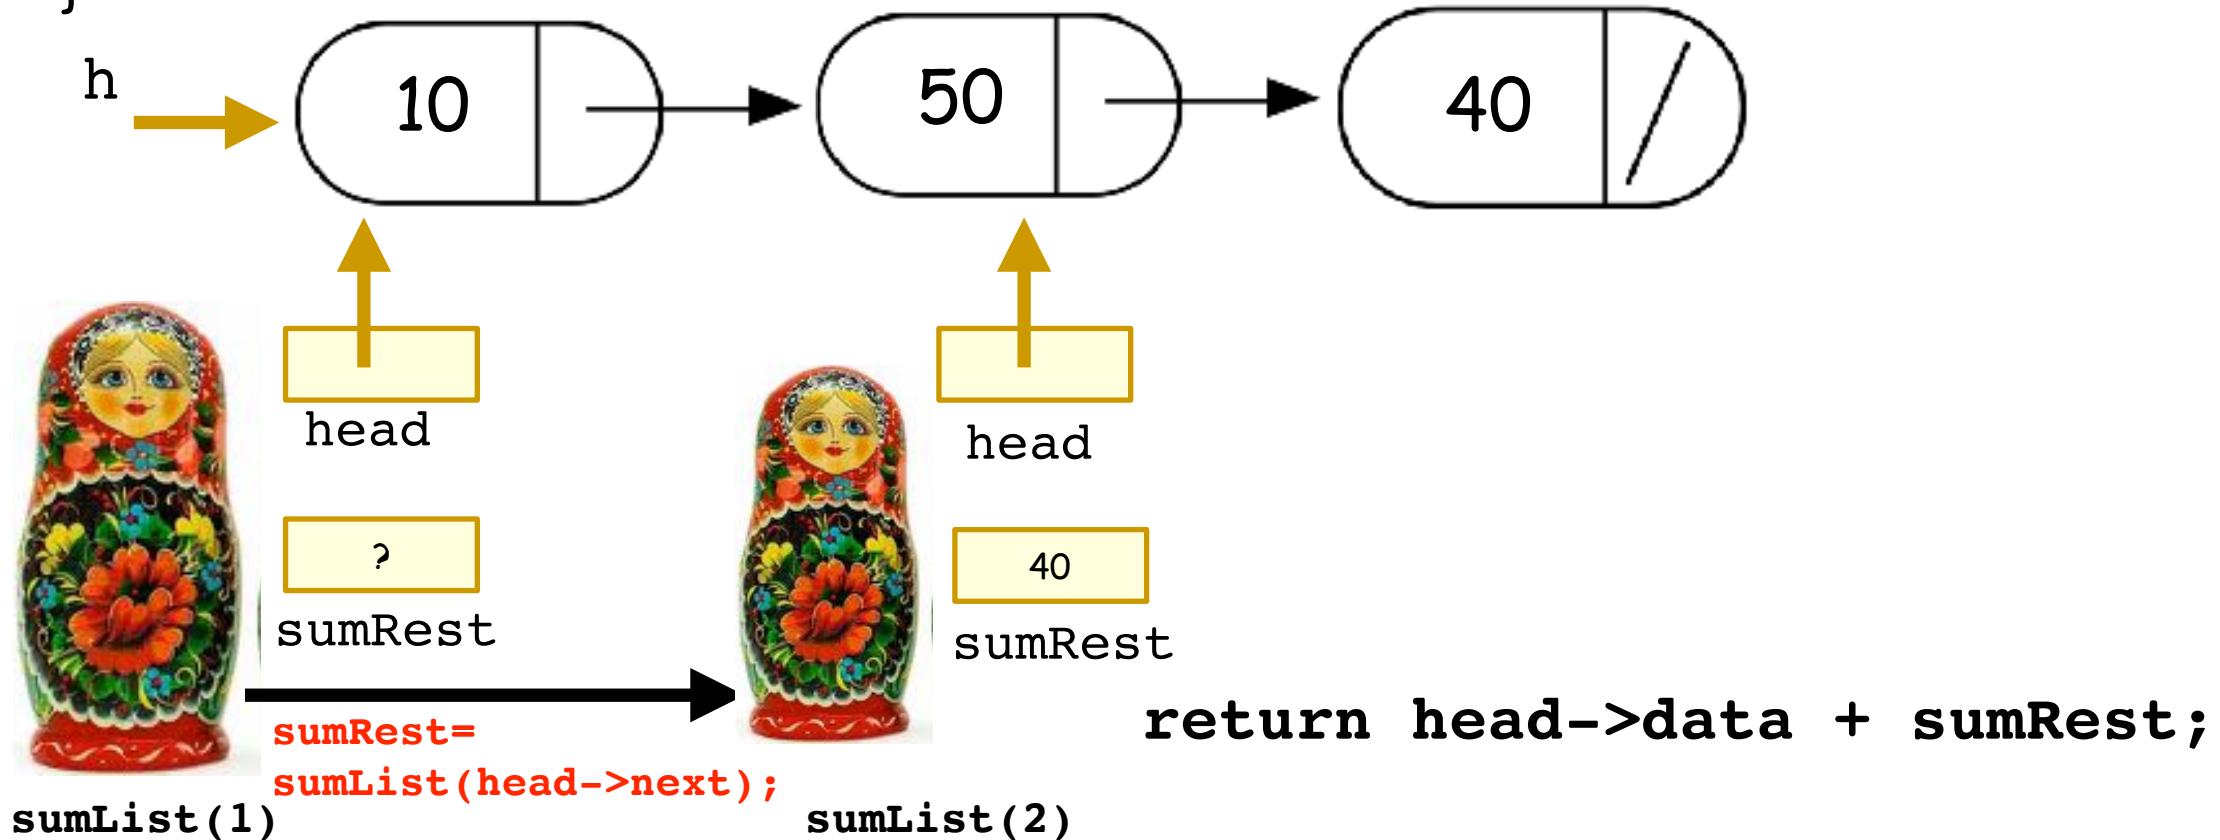

sumList(2)

sumList(3)

```
double sumList(Node* head){
    if(head==0) return 0;
    double sumRest;
    sumRest = sumList(head->next);
    return head->data + sumRest;
}
```

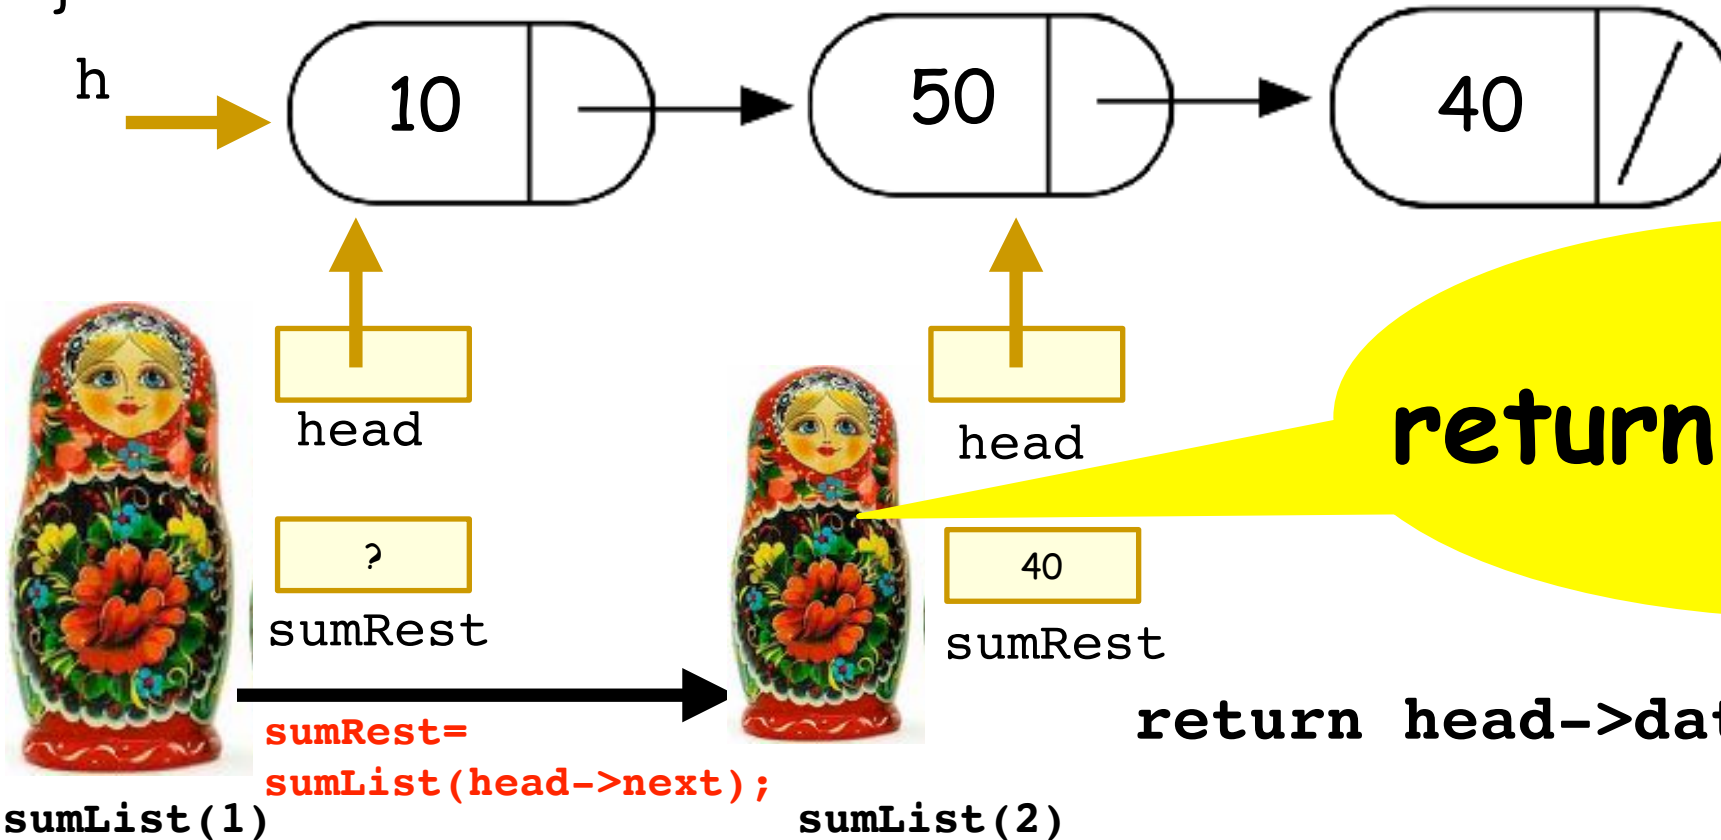

Hello again Sumlist(2)! Your younger sister returned 40.

```
double sumList(Node* head){
    if(head==0) return 0;
    double sumRest;
    sumRest = sumList(head->next);
    return head->data + sumRest;
}
```

Any last words, sumList(2)?

return 50+40;

return head->data + sumRest;

```
double sumList(Node* head){
    if(head==0) return 0;
    double sumRest;
    sumRest = sumList(head->next);
    return head->data + sumRest;
}
```

Hello again sumList(1)!
Your sisters are no longer on the stack,
here is your 90, store it safely!

head

sumRest

return head->data + sumRest;

sumList(1)

```
double sumList(Node* head){
    if(head==0) return 0;
    double sumRest;
    sumRest = sumList(head->next);
    return head->data + sumRest;
}
```

How did I get into this line of work, so many goodbyes make me want to cry.

`sumList(1)`

return 10+90;
B'bye and thanks for all the computation!

```
double sumList(Node* head){  
    if(head==0) return 0;  
    double sumRest;  
    sumRest = sumList(head->next);  
    return head->data + sumRest;  
}
```

**You have
no idea how many calls I had
to make to sum this list!**

```
double s=sumList(h);
```

```
double sumList(Node* head){  
    if(head==0) return 0;  
    double sumRest;  
    sumRest = sumList(head);  
    return head->data + sumRest;  
}
```

What happens when we call sumList on the example linked list?

- A. Returns the correct sum (100)
- B. Program crashes with a segmentation fault
- C. Program runs for a while, then crashes
- D. None of the above

```
double s=sumList(h);
```
